PTS D-STROY

TO COMBAT ODOURS & FAT BUILD-UP

Initial Treatment:

Pour 4 ounces of D-Stroy down drain for five consecutive days. It is best to treat drains prior to evening shutdown. Then, for the next 10 days pour 4 ounces down drain every other day.

Maintenance Treatment:

To keep the D-Stroy bacteria active, use twice weekly.

- **Toilets/urinals** - Clean area with all-purpose cleaner, then apply D-Stroy by spraying the surface, mist with water and leave it until the next time you clean. Be sure that disinfectants are not utilised before or after treatment, as disinfectants will kill the bacteria in D-Stroy.
- **Septic systems to remove odours and build up** - D-Stroy will maintain piping systems leading to septic tanks and add specific enzyme - producing bacteria to septic tanks. Add 4 ounces of D-Stroy per week per 1000 gallon tank capacity.
- **Grease traps** - D-Stroy, when alternated in use with Grease-B-Gone, will lengthen time between grease trap clearings. On heavily greased traps, first use Grease-B-Gone to thoroughly clean the trap. Add D-Stroy to the freshly cleaned grease traps at a rate of 16 ounces, once or twice per week, once again, alternating weeks with Grease-B-Gone.
- **Portable toilets, pit toilets, etc** - Addition of D-Stroy will help to control odours and speed solid waste digestion. Diluted D-Stroy at 9 to 4 ounces per gallon, sprayed on floor areas, will help to control odour problems and decrease fly population by reducing waste areas where eggs may be laid.
- **Carpet for pet urine, vomit or food spills** - Spray D-Stroy on affected area, mist with water and cover with moist towel or sheet to maintain active bacteria. Leave for 24 hours. If odour persists, reapply 48 hours later. Keeping D-Stroy moist allows product to wick down to pad underneath carpet and control odours. Be sure to rinse treated carpet area with damp sponge or rag. This prevents future build-up of dirty spots from D-Stroy detergent residues.
- **Laundry pre-spotter to remove make-up, blood, urine, solid waste, some foods and most stains** - Mist stain with water. Apply D-Stroy, allow to work overnight. Roll item up or place in plastic bag to maintain moisture. Then wash as normal.
- **Mattresses for blood, urine or solid waste** - Clean area with wet cloth, then spray with D-Stroy and agitate with cloth or brush. If possible, cover with damp towel to allow D-Stroy to work.
- **Walls with smoke damage** - Clean walls with an all-purpose cleaner, spray with D-Stroy, mist with water and leave to air dry. If odour persists, reapply 48 hours later.
- **Miscellaneous building problems** - D-Stroy can be diluted 2 to 4 ounces per gallon of water and sprayed lightly to control musty odours on drapes and furniture. D-Stroy will also be effective in locker rooms to control odours, and in trash chutes in apartment buildings. D-Stroy will also accelerate decomposition in compost piles containing grass, leaves and garden waste.
- **Appliances to remove odour** - Pre clean refrigerators/freezers as necessary. Spray D-Stroy, close unit and allow to work overnight. Rinse as necessary before appliance is placed back in service.
- **Natural gas drums/tanks to remove odorous substances** - The odorant used to identify natural gas is methyl mercaptan. Empty drums and small tanks can be deodorised with D-Stroy. Add 1 to 2 quarts of D-Stroy to a drum and dilute with 3 to 5 gallons of water. Roll drum several times per day to wet all surfaces. Continue until odour is digested. Process works best at room temperatures. Clothing that has been exposed to mercaptan can be sprayed directly with D-Stroy and misted with water or add D-Stroy directly to laundry water. For mercaptan that has been spilled on the ground, add an equal amount of D-Stroy and water to the spill.

NOTES: Strong acids, caustic or lye, destroy enzyme action. Never use D-Stroy in conjunction with or following disinfectant products, as enzyme-producing bacteria will be killed. D-Stroy works best at room temperature to slightly warm conditions. Activity and results may slow with cold temperatures.
