

# FOULPAC DWM

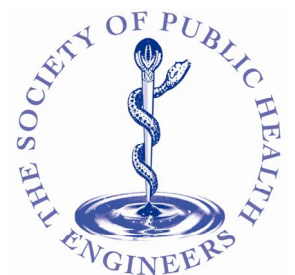

## Dry Well Mounted Effluent or Waste Water Pumping System

The Foulpac is a dry well mounted sewage pumping station designed to deliver large incoming flow rates. Being a floor standing station, the Foulpac alleviates the need for costly civil and groundwork.

The Foulpac system is designed with large storage capacity in mind. Five standard chamber sizes are readily available:

DIAMETER (MM)	HEIGHT (M)	STORAGE CAPACITY (L)
1200	1	1130
1200	1.4	1582
1500	1	1760
1500	1.2	2112
1500	1.5	2640

Please note that although the above are most common, our sizes are bespoke and the required storage level can be achieved.

The Foulpac is supplied complete with the following parts:

- GRP Tank with bespoke positioned inlet and vent.
- Pre Built manifold including connecting tank, gate valves and flanged elbows mounted on specialized floor frame.
- 2nd Pre Built manifold including 2x NRVs, 2x gatevalves all merging into one flanged discharge branch.
- Control panel and floats.
