

Hebefix

ABOVE FLOOR TANK

Hebefix - in new design

with even more possibilities

For four decades, the Hebefix tank has been the ideal solution when a hand basin or sink is to be installed and there is no waste water pipe nearby. Adapted to the requirements of the market, it now appears in a new design and with additional comfort.

As usual, the above floor tank can be quickly installed and offers ideal solutions in combination with the U3KS, the U3KS special or the U5KS. A hand basin in the hobby room or a washing machine in the cellar are easy to install. With a special float for low switching points, a shower can also be connected with backflow protection.

Thanks to pre-stamped cut-outs, the cover can easily be taken off without removing the inlet pipe in case of maintenance or service.

Application:

- > Sewage water from hand basins | showers | bathtubs | washing machines
- > Condensate from condensing boilers
- > Backwash water from water softener

Advantages to the previous tank:

- > Improved cover seal
- > Larger activate carbon filter
- > Simple unsnapping of the cover without disassembling the siphon or the inlet pipe
- > Connection for emergency disposal
- > All connections in the same place for ease in case of a replacement
- > Improved wall mounting
- > Can now also be equipped with U5KS
