PTS SOLODIAL UNIT

Single-zone Automatic Dialling Unit

The SoloDial has 1 alarm input that can in turn automatically dial up to 8 separate telephone numbers to play a voice message or send an SMS message. Faults within the pump station are sent from the volt free contacts within our selected Control Panel. (mounted separately).

- Capable of dialling out to 8 different telephone numbers
- Simple installation, only power supply and a BT socket required
- Can be connected to any device via a volt free contact relay

When an alarm is triggered from the host device, a signal is sent to the SoloDial panel via a volt free relay. The first number nominated is then dialled and the site address and appropriate alarm message played. Should recipient number one not hear the message, the SoloDial will then dial the next number. It is only when a recipient acknowledges having heard the message that it will cease.

Typical applications include water leak detection, oil leak detection, over temperature alarms, fire detection, intruder detection, power fails, UPS fails and pump fails.

The messages and telephone numbers are fully site programmable and require no specialist equipment or knowledge.

Specification	
Dimensions:	220x140x80mm
Power Supply:	230vac
Power Usage:	100Ma
Inputs:	1
Outputs:	8 programmable numbers
Telephone Systems:	LD/DTMF/PABX
