

SIMER
UTILITY PUMP

- Removes water down to a level of 2 mm
- Robust cast aluminium housing
- Self-venting starts at a water level of just 5 mm
- Cooling jacket for motor housing
- Replaceable cable inlet
- Accessory: Electronical switch Simer Level Control for automatic pump operation

DESCRIPTION

The Simer 5 is a robust utility pump for draining cellars, flat roofs, tennis courts or swimming pools. It can also be used to remove wastewater from building works such as core-hole drilling and concrete cutting. The Simer pump removes unwanted water quickly and efficiently, leaving a residual water level of just 2 mm, while starting to pump at a water level of just 5 mm!

The removable strainer, with a mesh size of 2 mm, reliably protects the hydraulic system from coarse solids. The variable hose connector allows connections to be made quickly and easily.

Connecting the pump permanently to the building's drainage system or using it to protect against back-flow is not permitted, however. Please refer to our UK3 to U6K range of pumps for these types of application.

The electronical switch Simer Level Control can be integrated into the cable inlet and switch the pump on automatically at approx. 7 mm water level. Puddles or floods can be removed immediately. The Simer Level Control operates either in automatic or manual mode.

The dry running of the pump (operation without media) over a period of more than 20 minutes must be avoided!
